

RoomList Express™

Turning Room Lists into Reservations Easily, Rapidly & Securely

What is RoomList Express™?

Manage Room Lists with Ease, Speed & Security

Passkey's RoomList Express™ (RLX) is a powerful tool that lets users manage their room lists with unmatched ease, speed and accuracy. RLX allows meeting planners to drop off their room lists anytime at a secure web location, where hotels can easily manage the lists and transfer the underlying reservations directly into their reservation system. Whether it is a room list of 40 or 4,000, Passkey's RLX can handle any size or format CSV list.

Meeting Planners Securely Drop-Off Lists

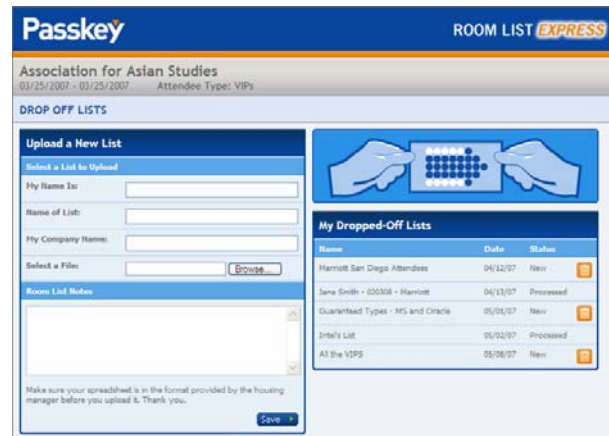

With RLX, hotels can provide a web address where planners can drop off their room lists anytime. Once a room list is dropped off, the hotel is notified via email so they can manage the room list and transfer the reservations into their system.

Handles All Room List Formats

RLX lets hotels easily manage room lists and transfer reservations directly into their PMS or CRS. RLX can handle any size or format of a CSV or Excel room list. Passkey's unique mapping technology can turn any room list into valid reservations.

From Room List to Reservations, Easily

Passkey's RLX completely automates the room list process, so hotels can turn any room list into valid reservations quickly, easily and accurately.

Reduce errors and labor by 50% or more

How do I Benefit?

Maximum Accuracy, Minimum Effort

Passkey's RLX eliminates the need to re-key data, therefore minimizing workload and errors. Room lists are turned into reservations in less time with maximum accuracy.

Allow Planners to Drop Off their Lists

Using email to send room lists is an inherently insecure process, since files must be downloaded onto a computer. With Passkey's RLX, planners drop off their lists online in a secure location, where they are managed online by the hotel without the need to download the files to a computer.
